

Manual water softener LT20

The LT model features two ball-type valves in brass; one is located upstream, where water flows in, and the other downstream, where water flows out of the softener. Moreover, various water pipe couplings are available more specifically: the 3/8"G and the 3/4"G couplings as well as quick pipe couplings for pipes measuring 8 or 10 mm in diameter. Note that equipment connected to softeners cannot be used when a resin regeneration cycle is in progress.

WATER COUPLINGS

TECHNICAL FEATURES

Height	900 mm
Weight	19 kg
Infeed water pressure	min 1 bar- max 8 bar
Max flow rate suggested	1000 l/h
Room temperature	min 4°C – max 35°C
Salt quantity for regeneration cycle	2.5 kg

INFEEED WATER FEATURES

Drinkable water
Temperature min 6°C – max 25°C
Clear water
Max water hardness 90°f

LITRES OF SOFT WATER BASED ON WATER HARDNESS						
°f	20	30	40	50	60	Cyclic Capacity m ³ .°f
°d	11	16	22	28	33	
ppm CaCO ₃	200	300	400	500	600	
LT 20	4200	2800	2100	1680	1400	84.0

THIS SOFTENER IS IDEAL FOR THE FOLLOWING USE:
